

ABSTRACT OF THE DISCLOSURE

This invention submission pertains to the automotive industry, specifically for Pickup Trucks. This invention is for any pickup truck or vehicle with a tailgate. The newly designed tailgate folds forward and lays into a 2"-3" recessed area of the pickup truck bed. The idea of this invention has many positives. The new design eliminates any blind spots behind the vehicle, increasing the drivers visibility and safety and also increases fuel economy since there is no wind resistance from the tailgate being in the closed position and easier loading and unloading capabilities. The Safety Travel Tailgate can be offered in a manual or automatic model. In addition to the redesign of the tailgate, The Eagle Eye Perfect View Mirror contains both a normal traffic vision, and downward angle vision, which increases the vision behind the vehicle, without having to adjust the mirror.
